

Frameless Walk in Kennel Door

Description

The Frameless Walk in kennel door usually forms part of a kennel system with side panels dividing walls and upper ventilation panels. The system is designed to provide a very attractive, high end appearance alternative to standard walk in kennels.

Glass provides a very easy to clean and hygienic solution to animal husbandry requirements. The whole installation has a very 'minimalistic' look with as little stainless steel used as possible.

Doors can be specified with clear, obscured, opaque or a combination of half obscured or opaque and half clear as shown here.

Side panels are normally specified as opaque or obscured to provide extra privacy for the occupants.

Door frames and bodies are manufactured out of 304 grade stainless steel.

All doors are supplied without a fixing frame as standard so there is no lower bar to provide a tripping hazard.

The doors can be specified with a wide variety of options including closing trim panels, ventilation panels, door restraining straps, side panels and dividing walls. As a further option the dividing walls can be manufactured to swing open to allow for increased run sizes and multiple occupancy.

Other options include removable cat shelves of different shapes and sizes.

The doors are supplied as standard with high quality frameless hinges and door locks & latches.
