

PRIVATE OUTDOOR KITCHEN & BAR

THE BRIEF

A private domestic client in Northumberland approached Stellex with a brief to design and manufacture a high-quality outdoor kitchen and bar that combined contemporary aesthetics with robust construction suitable for year-round outdoor use. The finished installation needed to offer practical cooking and storage facilities while remaining visually impressive as the centrepiece of the client's garden.

DESIGN & MATERIALS

The bar was designed around premium materials chosen for both durability and visual impact. The worktop was manufactured from Neolith Iron Corten, a stone surface that provides distinctive orange-rust tones and subtle metallic highlights, giving the bar a bold industrial appearance.

Beneath the stone top, the cupboards were constructed entirely from stainless steel, ensuring a highly durable structure capable of withstanding outdoor conditions. To soften the aesthetic and improve longevity, all cupboard doors and panels were finished with a grey powder-coated coating. This protective finish provides a hard-wearing surface that not only enhances the visual appearance but also delivers long-term hygiene and corrosion protection.

Worktop manufactured from Neolith Iron Corten.

Stainless steel storage drawers designed specifically to store charcoal and logs.

INTEGRATED FEATURES

Attention to detail was central to the design. The bar incorporates a number of concealed elements that maintain the clean visual lines of the installation while providing practical functionality:

- Hidden induction cooker integrated beneath the Neolith stone worktop
- Concealed lighting built into the bar units to provide subtle evening illumination
- Stainless steel storage drawers designed specifically to store charcoal and logs

These carefully integrated features allow the bar to function as a fully capable outdoor cooking and preparation station without compromising its sleek appearance.

COMPLETE OUTDOOR ENTERTAINMENT SPACE

Although the core bar structure and stainless-steel fabrication were designed and manufactured by Stellex, the wider outdoor space was planned as a cohesive entertainment area. The pergola structure and the barbecue equipment positioned on the counters complement the installation and can all be supplied by Stellex. Our team can also provide all electrician and plumbing services to ensure a complete solution from start to finish.

THE RESULT

The completed project demonstrates how bespoke fabrication and innovative material combinations can transform a domestic space into a professional-quality outdoor entertaining area. The combination of Neolith stone, stainless steel construction and discreet integrated technology results in a bar that is both visually striking and built for long-term durability.

"We are absolutely thrilled with our new outdoor kitchen and bar, beautifully designed and bespoke. From the very beginning, Stellex brought exceptional expertise and creativity to the project, carefully guiding us through every detail. The combination of stone and stainless-steel works perfectly and the attention to colour and finish is simply stunning."

The installation team were fantastic—professional, friendly and meticulous in their work. We truly couldn't fault the service from start to finish. We would highly recommend Stellex to anyone looking for a high-quality, beautifully designed outdoor bar and kitchen." Mick & Louise - Owners
